Work experience

2013 – current

Webmaster

PO-Raad

What a lot can happen in merely five years! When I started working the job only consisted of making newsletters, banners, and other intermediate internet related tasks. Within a year we launched the new website in a new version of the CMS and in a brand new design. The number of users has doubled in recent years to a total of 350.000 a year!

As you probably will understand: the website we launched four years ago is no longer the website it is now. For we have built a member portal, an intranet and many other functionalities within it. Visually, I have recently designed and built two landing pages that gives us the opportunity to take our storytelling to the next level.

Not only on the website of the PO-Raad have I been able to express my creativity. I also produced a corporate multimedia identity and was involved in many other video and animation related projects.

2012 – current

Photographer

PASSIE IN BEELD

Since I can remember I have been working with images and whether it's in photography, graphic design, theatre, lighting design, Internet or video there are always these questions: What does it say? What does it make you feel? What does it make you see?. Those questions became even clearer when I started my own company passioninsight.

Becoming a photographer has always been one of the career paths I could have but only after changing from analogue to digital photography was I able to take that path. Not only my eye for detail comes to place in its place in this profession, but also my passion for people and theatre.

The experience I have a theatre technician, lighting designer and performer allow me to capture almost instantly, the most important moments of shows and performances.

But I have broadened my portfolio and my skillset now also includes portrait, events wedding and landscape photography as well.

2012 – 2013

Webmaster

Drukvergelijker.nl

- Communication strategy
- Daily update
